SHAUN VERCAUTEREN

FRONT-END WEB DEVELOPER

WORK EXPERIENCE

MES Developer | Front-end Specialist

Renson, 2019 - Present

- Founding developer of Renson's MES team. Built MES-MII Outdoor with three external consultants brought in for the delivery, then took over main ownership when they left, and onboarded the new internal developers who joined the team.
- Took the Renson Outdoor production site from paper to paperless on SAP MII and Industry 4.0 standards. The platform now guides and documents manufacturing on ~200 workstations across 60 production lines.
- Own the development and architecture of the front-end platform, an Nx monorepo comprising 9 Angular applications, 100+ libraries, and 50,000+ lines of code, while leading UI/UX design from initial analysis through final delivery.
- Drive projects from concept to delivery, bringing IT and the plant floor together. Lead analysis workshops with production and business stakeholders, turn the outcomes into user stories, guide the team and follow up until release, and report progress to team leads.
- Mentored every developer joining the project in SAP MII backend, MII and Kepware server technologies, and Angular, while overseeing code reviews and approving team merges. First adopter of SAP MII in the company.
- Held full-stack ownership for the first three years (Angular, SAP MII, Sybase), before specializing in front-end development while continuing to provide server support, production support, emergency interventions and business analysis alongside the front-end work.

Java Consultant

Realdolmen, 2018 - 2019

- Built Warmste Hackathon with a team, contributing full-stack: a competition platform tracking standings, team communication and the flow of coaching and tooling. Angular, Java, Spring Boot, Hibernate.
- Contributed full-stack to MatchMan, an internal staffing platform matching consultants to customer projects on technical skills, with search-driven planning and opportunity follow-up. Angular, TypeScript, Node.js, Express.

Full-stack Developer (Intern)

b-inside, 2018

- Graduation project: built an ERP warehouse logistics monitor demo in Angular and Progress OpenEdge.

PROFILE

Started as a Java consultant building internal platforms, then joined Renson as the founding developer of its MES team. There I took a full production shift from paper to paperless and built an extensive 9-application front-end monorepo.

Specialised into front-end after three years of full-stack ownership, and now own the front-end architecture the whole team builds on.

Known for making large Angular codebases survivable and for translating the factory floor into software.

Harelbeke, Belgium

Open to remote / hybrid

LANGUAGES

- Dutch (native)
- English (professional)
- French (basic)

SKILLS

Front-end: Angular 7-22, Angular Material, TypeScript, RxJS, NgRx, Nx, HTML5, CSS/SCSS, responsive design

Backend & data: SAP MII, Node.js, Express.js, NestJS, Java, Spring Boot, Hibernate, SQL Server, PostgreSQL, Sybase, JPQL

Testing & tooling: Cypress, Playwright, Jest, Vitest, unit / E2E / user-acceptance testing, Git, Azure DevOps CI/CD, GitHub Actions, Agile/Scrum

Domains: manufacturing & Industry (metal), HR services, logistics

EDUCATION

Vives — Associate degree, Computer Science Programming

2014 - 2018

Certifications: Oracle Certified Associate Java SE 8 Programmer (1Z0-808) · Angular Architects: Modern Angular Architectures, Advanced TypeScript, AI for Developer Productivity · NestJS: Fundamentals, Advanced Concepts & Architecture, Advanced Patterns · Mendix Rapid Developer · acADDemICT (Realdolmen)

STRENGTHS

- Front-end & monorepo architecture
- Mentoring and onboarding
- MES / Industry 4.0 knowledge
- Bridging production floor and IT

INTERESTS

- Japan
- Artificial Intelligence
- Gaming
